## **DETAILED ACTION**

### ***Election/Restrictions***

Claims 15- 46 are cancelled. Election was made **without** traverse in the reply filed on 5-5-06. Applicant's election without traverse of claims 1-14 in the reply filed on 5-5-06 is acknowledged. Claim 47 is added by amendment.

### ***Claim Objections***

Claims 5 and 47 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.

Claim 5 recites a method of making the permselective membrane, but fails to further limit limitations as to the membrane itself.

Claim 47 recites "wherein the porous, graded particulate layer is formed by dip-coating the support with a series of boehmite sols having decreasing particulate size distributions". Claim 47 recites a method of making the porous , graded particulate layer, but fails to further limit limitations as to the porous , graded particulate layer itself.

### ***Claim Rejections - 35 USC § 112***

Claim 47 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1724

Claim 47 line 2 recites "the support". There is a lack of antecedent basis for "the support" in previous claim limitations.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Abe(4865630).

Abe teaches a permselective membrane assembly comprising a porous , graded particulate layer(column 3 lines 64-68; column 6 lines 3-21). Abe further teaches a porous support(14a in figure 4) and a permselective membrane. Abe further teaches wherein the porous support is alumina(column 3 lines 12-19). Abe further teaches wherein the permselective membrane comprises silica.. Abe further teaches wherein the permselective membrane comprises nanosil. Abe further teaches the permselective membrane has permanence to hydrogen gas(column 7 lines 37-43).

Claims 13 and 14 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Abe(4865630).

Abe teaches a method for promoting the yield of a gaseous reaction product by selective permeation using a permselective membrane assembly comprising a porous graded particulate layer(column 3 lines 64-68; column 6 lines 3-21). Abe further teaches wherein the gaseous reaction product is hydrogen.

***Allowable Subject Matter***

Claims 10-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 10 recites "wherein the porous, graded particulate layer is prepared from a plurality of sols having narrow particle size distribution. Abe teaches in Example 4 a porous support, a first layer of a slurry in the form of molybdenum sulfide, and a second layer of a slurry of boehmite sol. It would not have been obvious to someone of ordinary skill in the art at the time of the invention to substitute a porous, graded particulate layer which is prepared from a plurality of sols having narrow particle size distribution for the single layer of boehmite sol with a layer of molybdenum sulfide because Abe does not suggest such a modification. Claims 11 and 12 depend on claim 10 and hence would also be allowable upon incorporation of claim 10 into claim 1.
